

Frontend Hackathon -Progress Report Till 12:00 PM- 19.07.2020 :- By Lokendra Singh

BAKERY AND RESTAURANT PAGE

Description: Starting from basic HTML, I added some stuff i.e “Navbar” using Bootstrap framework and modified the same with CSS. Have used just a ‘Prompt() method’ to include some of the “Javascript” programming language as well:

Screenshot of my work till now is as below:-

Route Map:-

(Not in functionality right now)

- 1). Included a logo depicting my Bakery and Restaurant page - This image is labeled for reuse by Google.
- 2). In Navbar: Links:- Home, About Us, Explore More-->Menu Card, Best Deals, Contact Us.
- 3). Search Bar :
- 4). Search Button:
- 5). Below Navbar, an Image which is also labeled as free to reuse by Pixabay.com.

Adding Further till 12:00 AM 19.07.2020:-

- 6). Have created a simple slideshow at two ends of the section at the very beginning of the home page by using "Animation" functionality in CSS.
- 7). Have put a simple working layout designed in Adobe XD just below the slideshow containing section.
- 8). Have named the Bakery & Restaurant as "BR's Town" where BR stands for "Bakery & Restaurant"

Adding Further till 12:00 PM 19.07.2020:-

- 9). Have added a HTML file named "about.html" where I will be placing all the required stuff as per "About Us" page that will contain a brief introduction of my hypothetical Baker and Restaurant named BR's Town.
- 10). Have used bootstrap to add the navigation bar and have made a small change that when anyone clicks on the "About Us" button in the navigation bar then the "About Us" page is loaded given that the "About Us" button disappears from the navigation bar.

Screenshot of "About" Section:-
